SCHEDULE 1 — SOW-1: METER & NETWORK TELEMETRY DATA PLATFORM

1. Objective. Consolidate smart water-meter reads (1.1 million meters), network pressure and flow telemetry, and billing data into a governed lakehouse with automated data-quality monitoring.

2. Technical approach (from Supplier proposal).

"To accelerate delivery, the Supplier will deploy its proven **IngestIQ** ingestion and data-quality framework (a pre-existing Supplier Material), already used in production for a UK energy retailer's half-hourly smart-meter data. IngestIQ's SQL Server, SFTP and Kafka connectors, its 140-rule data-quality engine and Azure Data Factory orchestration templates will be configured for Aldergrove's sources. This reduces build effort by approximately 30% compared with a bespoke build and is reflected in the Charges."
