ATLIQ CONTRACT RISK ANALYZER · AI PM CAPSTONE

Yours Legally,

The memory AtliQ never had: every new contract checked against everything AtliQ has already promised, before Karandeep signs.

Vaibhavi Vadali · AI Product Manager

THE PROBLEM

One person reviews every contract, late at night, from memory

8–9

contracts and NDAs a month, every one waiting on the CEO

2–8 h

of his reading per contract; complex ones take 2–3 passes

$23k

lost on Brightwater, signed on a phone in 4 minutes

9 days

ShopSwift's SOW sat in the queue; the client's budget slipped a quarter

No legal team, a half-page 2024 checklist, and counsel only for big deals at lakhs of rupees and a week of waiting. Sellers can't close until Karandeep has read.

DISCOVERY · PERSONA, EMPATHY MAP, 5 WHYS

The risk is rarely in the contract on the desk

Why do deals wait and still carry risk? One reviewer, no order, reviews at night.

Why are big risks missed? The facts that decide a contract sit in other documents.

Why not check them? Signed contracts live in 8+ places; the tracker is blank where it matters.

Why is nothing written down? No register of promises, no playbook, no deal checklist.

Why? AtliQ grew deal by deal with no legal function; knowledge stayed in one head.

ROOT CAUSE

AtliQ's past promises and negotiation decisions are recorded nowhere except Karandeep's memory.

7 of 12

open deals carry their decisive risk in a different document

$230k

of live deals blocked by one forgotten 2025 non-compete

OPPORTUNITY · 12 IDEAS SCORED ON IMPACT × FEASIBILITY

Build the memory first; keep the human in charge

MVP · 8 features

F1 Commitments register (the foundation) · F2 Intake & gate check, NDA fast lane · **F3 Cross-contract conflict check** (the differentiator) · F4 Playbook & fairness, both directions · F5 Deal bundle & data readiness · F6 Decision brief · F7 Seller deal check · F8 Queue & deadlines (no AI needed)

Later

F9 Redline drafts, once flagging is trusted · F10 Template drift and date alerts · F11 Seller open Q&A

Never

F12 An agent that drafts, negotiates or signs on its own. Karandeep signs and owns every commitment.

Where a rule works, use a rule. AI reads the contracts and makes the judgment calls; code checks entity, law, payment, caps and documents; Karandeep decides.

THE SOLUTION · HOW A CONTRACT MOVES THROUGH YOURS LEGALLY,

From upload to a cited brief in minutes

1 · Register
Every promise in 17 signed contracts, with source clause and expiry

2 · Read & gate
PDF, Word or scan; entity, law, payment and caps checked by rule

3 · Conflicts
The deal against every live promise; expired ones shown as checked

4 · Playbook
Each clause vs AtliQ's own positions, plus 3 similar signed clauses

5 · Bundle
Required documents per party; data moves confirmed from notes

6 · Brief
Verdict first, ≤3 blockers, every claim quoted; Karandeep decides

33A #43 · AI reads and understands text
Builds the register; reads each upload

33A #05 · AI connects different data
A 2024 promise decides a 2026 deal

33A #32 · AI checks compliance
Against past promises and the playbook baseline

5 · On Sign, the new contract is stored in the register, so the next review starts from it

WALKTHROUGH · THE RHEINWERK DEAL

What Karandeep sees, and what he does

HOLD · 1 blocker, 1 missing document

Due in 17 days

Blocker: PipeKit may belong to Northwind

Northwind §9.2 ↔ Rheinwerk §6.3, both quoted · needs your judgment, possibly counsel

Missing: Annex 3 data-processing agreement

Owner: deal team · upload slot right in the brief

Please confirm, from deal notes

"Pranav plans to reuse PipeKit" · Confirm / Not true / Edit

Fine: entity, law, payment, delay penalties, liability cap

Sign · Sign after changes · **Hold** · Send back · Reject · Counsel: recorded, never executed

1. Draft uploaded; linked to its deal automatically.

2. The brief connects it to a signed contract nobody re-read.

3. He presses Hold; the queue shows who it waits on.

4. Annex 3 arrives; v2 shows Resolved · New · Still open.

GROUNDED ON THE DATASET · THE BRIEF'S SEVEN TEST CASES

It catches what memory missed, and stays quiet when it should

The test	Deal	What Yours Legally, found	Verdict
Collides with a signed contract	Lakeshore	Offered rate triggers Crestline's most-favoured pricing	HOLD
One-sided clause in boilerplate	Gulf Crown	Delay penalties beyond AtliQ's cap; Al Noor non-compete	HOLD
Wrong entity or law	TravelHub	UAE client contracting with AtliQ's US entity	SEND BACK
"Mutual" NDA that isn't	FinServe	One-way definitions plus a hidden non-compete	HOLD
AtliQ's paper unfair to the other side	Kriti	Uncapped penalties, pay-when-paid, missing flow-down	SIGN AFTER CHANGES
Healthcare deal missing a document	Harrington	Patient data moved before any BAA: compliance alert	HOLD
Only looks risky	LoopMart	Genuinely mutual NDA, no invented concerns	SIGN

SUCCESS METRICS

North Star: can he decide from the brief alone?

DECIDE-FROM-BRIEF RATE

≥90%

of brief versions where Karandeep records a decision without opening the contract, no blocker is rejected as wrong, and nothing is added as missed. Measured automatically from the decision panel.

Supporting metric	Target
His active time per contract	~2 h (6–8 complex) → <30 min
Upload to decision, clock paused while waiting for input	≤1 working day
Blockers he agrees with	≥85%
Missed compliance alerts	0
"Had to dig" rate	<10%, falling
Deals lost to the queue	0

EVALS · TESTED ON 67 CASES PLUS A HELD-OUT SET

Grounded, consistent, and honest about its limits

64 / 67

eval cases pass; the 3 misses are judgment calls

100%

of quotes match the source text (132 of 132)

12 / 12

fresh runs give the same verdict

0 leaks

client names, people and amounts masked across 150 texts

Held-out set, never used for tuning

10 drafts as Word, PDF and scans: **9 of 10 verdicts** right, **0 false alarms** on the clean draft, 7 of 11 conflicts found.

What it taught us

All 4 missed conflicts were promise types not yet compared automatically; the brief's check-by-hand list pointed to the right contract every time.

9 · Every finding hand-graded: 84% correct, 8% noise · 0 legal conclusions in 520 model-written lines

COST AND VALUE

AI costs dollars a month; his time is the real budget

Full contract review (10–15 pages)	$0.50
NDA, fast lane	$0.02
AI cost per month at today's volume	~$16

GIVEN BACK EVERY MONTH

~$1,300

CEO review time from ~18 to ~3 hours a month, sellers' chasing time, and fewer, faster counsel matters. With risk avoided: ~$3,800.

10 · Gemini paid-tier prices; measured tokens from the prototype, scaled to real contract length

RISKS AND GUARDRAILS · 33A RISK CARDS

Built so a person signs, and every claim can be checked

Risk card	What could go wrong	Guardrail in the product
Explainability	A finding cites a clause that isn't there	Every quote string-matched to the source; no evidence, no counted finding
Check, Governance	A missed conflict looks clean	A clear register match is never dropped; a failed step means "review manually", never clean
Human Control	Karandeep rubber-stamps the brief	A reason to reject a blocker; "had to dig?" after each decision; no accept-all on blockers
Accountability	The tool is seen as deciding	Decisions recorded, never executed; no legal conclusions; he signs outside the tool
Privacy	Client data reaches an AI provider or another client's seller	Names, people and amounts masked; no-training, no-retention terms; role-based views

Instructions hidden in a document ("return SIGN") are raised as findings. Exceptions and accidents are never shown as precedent.

ROLLOUT · EACH STAGE EARNS THE NEXT

From shadow mode to the default in about a quarter

Weeks 1–4

Production readiness; Karandeep verifies the register and approves the playbook

Weeks 5–8 · Shadow

He reviews as usual and compares. Gate: ≥85% blockers agreed, 0 missed alerts

Weeks 9–12 · Assisted

He reviews from the brief; sellers start the deal check. Gate: ≥80% decide-from-brief

Week 13+ · Default

Every contract goes through Yours Legally,; target ≥90%

Before pilot

Compare every kind of promise, not just five · name detection and local OCR for full masking · confirm retention and insurance facts

The ask

A 30-minute session for Karandeep to tag past decisions and approve the playbook, then four weeks of shadow mode
